The low cost, Low Impact Development solution for retention, detention, conveyance, recharge and reuse.

RETENTION →

Highly Effective in Clay Soils

DETENTION →

Less Expensive, Stronger, More Effective Than the Competition

RESIDENTIAL REUSE →

1 Chamber = 10 Rain Barrels

WATER QUALITY →

The Lowest Cost, Highest Pollutant Removal Alternative

Conveyance

Although most people associate plastic chamber systems with storm water storage, they can also be effectively used for storm water conveyance. Due to the large size of the StormChambers®, a single row can provide a conveyance capacity approximately equivalent to 48 inch diameter pipe.

Benefits over pipe for conveyance:

- Significantly lower material and installation cost.
- Significantly quicker and easier to install.
- Significantly better water quality enhancement.
- Recharges ground water supplies.
- Helps maintain base flow to streams, wetlands, and other water bodies.
- Provides peak flow attenuation.
- Reduces pond storage requirements.
- Significantly reduces algal blooms and pond maintenance.
