

# LOSING YOUR LAKE?

## STOP THE LEAK<sup>sm</sup>

TO ORDER PONDSEAL: Call 1-800-688-2649  
or visit [www.pondseal.net](http://www.pondseal.net)

### **PONDSEAL**<sup>™</sup> works without drawdown

PONDSEAL offers reliable bentonite clay delivery through water creating an impermeable seal to stop leaks in ponds and other waterways. The product's weight and structure allow each composite particle to sink and self-compact, adding physical integrity to the resulting sealant layer. Once a water body is determined to be leaking, traditional techniques limit the remedy options. Unlike with other bentonite-based alternatives (e.g. powders, chips, pellets), PONDSEAL will not drift or dissipate, so the material is certain to go exactly where you place it and where you need it. Appropriate applications include ponds, lakes, reservoirs, canals, dams, and more.

### **PONDSEAL**<sup>™</sup> simple & effective

PONDSEAL utilizes a dense aggregate (limestone) core wrapped in powdered bentonite clay to dependably deliver a sound seal to any area prone to or experiencing water loss. The product is made from the same high quality Wyoming sodium bentonite used in landfills and other demanding sealing applications. Due to the extreme low permeability, internal weight (density), and expansive characteristics of this novel composite particle, each individual "pebble-like" unit swells into adjacent particles to produce a uniform and durable layer – stopping the leak at its source.

### **PONDSEAL**<sup>™</sup> nature's duct tape

Applications of PONDSEAL extend well beyond "liner" installations. While a veneer of the material blanketed over sand, gravel, or stone is an effective means to fortify the bottom or side slopes of a basin (without the need for feet of compacted, local clay), it is the product's versatility that has led to the nickname "nature's duct tape." From an insurance anti-seep around pipes and control structures to a plug for animal burrows and remnant field tiles to a structurally stable, stand-alone backfill in a cut-off wall (as reinforcement for a dam or earthen berm), the ways in which PONDSEAL can be used are seemingly bound only by the creativity of those confronting seepage issues.

Use PONDSEAL for reliable bentonite clay delivery  
and put an end to leaking waterways.

▶ **Targeted placement**  
no waste, just results

▶ **Technically effective**  
extremely durable and  
structurally stable

▶ **Simplifies installations**  
reduces project costs by saving  
time and labor

▶ **Highly versatile**  
for leak prevention and repair
