*Weir Guard*TM

Overflow Control Structure Filter
For Wet Or Dry Retention & Detention.

Patent Pending

A screened filter for overflow control structures on wet or dry detention or retention. The **Weir Guard** is an unobtrusive, inexpensive, and adaptable product with minimal to no maintenance. It can be used to retrofit existing basins and provide a simple mitigation possibility for almost all developers. The unique shape allows for falling rain to backflush the screens which dramatically reduces the need for maintenance. Made from marine grade fiberglass and stainless steel, the **Weir Guard** is built strong to last and comes with a 5 year warranty.
